INTRODUCING THE CONSOLIDATED LPG VAPORIZER

THE APPLICATION of these exclusive Tank Heater Vaporizers is one of the greatest and most valuable insurance policies you will ever have. It guarantees maintaining the proper pressure to your home, farm, business or industry all the places where propane is needed. It only operates when necessary, at peak demands, and when temperatures dip to all time lows. REMEMBER, it only works when needed.

PORTABILITY. The LPG Tank Heater Vaporizer is a completely portable piece of equipment. It goes where the propane storage tank goes. It can easily be hauled over rocks, railroad tracks, country roads or any rough terrain.

FUNCTION. The operation of the LPG Tank Heater Vaporizer is one so simple, it works like a hot water heater, only when needed. When the pressure begins to drop in the propane storage tank, the tank heater automatically turns itself on until the desired tank pressure is maintained, then turns itself off.

FROZEN REGULATORS. There will never be another regulator freeze-up due to the fact that the regulator is neatly contained inside a heated chamber. Another mind easer.

COMMERCIAL & INDUSTRIAL. For applications where a large BTU requirement is concerned, more than one or two units may be manifolded together for double or triple vaporization capacity. Again, even with multiple units all functions are exactly the same including the portability.

PEAK PERFORMANCE. Many successful years with the LPG Tank Heater Vaporizer as there are numerous major installations. Atomic Energy Commission, Armco Steel Corporation, Rainbow Bakeries, Princeton University High Altitude Observatory, Colorado School Systems, Ft. Warren Air Force Base in Wyoming, American Telephone & Telegraph, and Farmer's Union Co-op, to mention only a few of over 16,000 installations.
